

EVA_OS Token ROI Ledger 2026-06-13

Generated At: 2026-06-13T16:32:22

System: EVA_OS

Record Count: 178

Quantified Records: 0

Unquantified Records: 178

Formula:

Token ROI = (revenue_generated + cost_saved + loss_avoided + asset_reuse_value - ai_cost - human_time_cost) / (ai_cost + human_time_cost)

Top Records:

- Executive Command Center: EVACommandCenter_13062026 | System Reliability | Unquantified
- Executive Command Center: EVACommandCenter_latest | System Reliability | Unquantified
- Executive Command Center: EVACommandCenter_13062026 | System Reliability | Unquantified
- Executive Command Center: EVACommandCenter_latest | System Reliability | Unquantified
- Executive Command Center: EVACommandCenter_07062026 | System Reliability | Unquantified
- Executive Command Center: EVACommandCenter_07062026 | System Reliability | Unquantified
- Report Decision Support Index: ReportDecisionSupportIndex_07062026 | Reusable Asset | Unquantified
- Report Decision Support Index: ReportDecisionSupportIndex_latest | Reusable Asset | Unquantified

- Validation Task Priority Plan: ValidationTaskPriorityPlan_07062026 | Validation Efficiency | Unquantified

Assumptions:

- This ledger records reusable value evidence; it does not fabricate financial gains.
- Financial fields stay 0.00 and roi_score stays null until the user supplies measured revenue, cost saved, loss avoided, asset reuse value, and value_contribution.
- Manual value entries are counted as Quantified only when review_status is Reviewed and at least one real financial field is set to a non-zero value.
- System audit, readiness, validation queue, report, metadata, data-quality, and cross-validation files are FACT evidence that the system is working.
- value_contribution is an INFERENCE used for prioritization, not proof of cash profit.
- Research-only boundary remains active: no live trading, no real orders, no payments, no betting execution.

Research-only. No live trading. No real orders.
